function.**

Concealed cisterns.

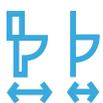

Space-saving solutions.

Technology behind the wall.

If you decide to change your hotel bathrooms in a modern and spacious well-being area, then a concealed solution is the best choice. Geberit as a European market leader in sanitary technology has been setting standards for more than 140 years. Geberit pioneered 1964 with the production of the concealed cistern and looks back on more than 50 years experience and success in that field.

Placing the cistern behind the wall and choosing a wall-hung solution has a lot of advantages. For your hotel bathroom it means saving space and more hygiene. As the cistern is behind the wall, the staff has got less to clean and cleaning the ceramics is also much quicker. Thus, this solution even saves time and money.

Space-saving

With a wall-hung and concealed solution you are saving space.

Premium quality

10 years guarantee and 25 years spare parts availability. Worldwide service.

Easy to clean

Cleaning below wall-hung solutions is really easy and time-saving.

60
Mio

Reliable

In Geberit products there is the experience of more than 60 mio installations.

Easy maintenance

The proved and tested products are easy and tool-free to maintain.

Load bearing

The weight of the wall-hung WC is borne by the installation element and not by the wall and carries 400 kg.

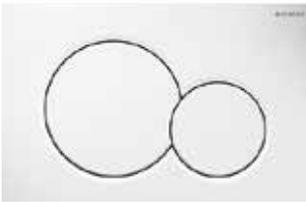

The advantages at one glance:

- Enhanced bathroom design thanks to concealed cistern.
- The cleaning of the bathroom gets easier and quicker thanks to the wall-hung solution.
- The maintenance of the cistern is really easy through the opening behind the actuator plate.

Geberit Sigma.

Playground for design.

Sigma10

Sigma20

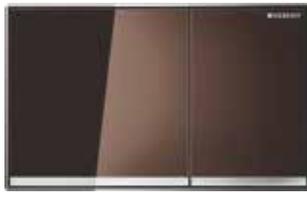

Sigma30

Sigma50

Sigma60

Sigma70

Sigma80

Special request concert.

The Geberit actuator plates make the difference. A wide variety of materials, forms, colours and surfaces offer a big playground for design wishes and styling options:

- Geberit Sigma offers front actuation.
- Guaranteed availability of functional spare parts for 25 years.
- The maintenance of the Geberit Sigma cistern is tool-free.

The Geberit classic.

The Geberit Sigma cisterns have been tried and tested a lot and have proven their reliability in numberless projects. The cisterns can be installed in almost every bathroom situation and offer many design options in layouting your ideas. All the Sigma cisterns provide the connections for either a Geberit AquaClean or the Geberit DuoFresh function.

The advantages at one glance:

- The Geberit Sigma system covers a wide range of applications for all sorts of bathroom situations.
- The Geberit Sigma actuator plates come in a big variety of materials, forms, colours and surfaces and meet all design requirements.
- Concealed cisterns in combination with wall-hung ceramics save space, time and money and are more hygienic than conventional solutions.

The advantages at one glance:

- The Geberit Omega system is a solution provider for special applications.
- Wall-even actuators are an elegant option.
- There are three different installation heights possible with top or front actuation.

Geberit Omega.

The solution provider.

Geberit Omega – particularly small actuator plates, together with a concealed cistern that is available in three different installation heights. The result is impressive: Geberit Omega opens up unexpected opportunities when it comes to the design of your bathroom, where bottlenecks such as windows and roof pitches are elegantly mastered.

Omega60

Can be mounted surface-even

Omega30

Omega20

When space is short, an innovative flush actuation from Geberit Omega can provide the necessary flexibility. It can be optionally mounted on top or in front of a prewall.

Public solutions.

Design and function reconciled.

The public areas of a hotel are the hallmarks of quality and design and will set trends public sanitary rooms with the various design families of actuator plates and covers from Geberit. Models are available in die-cast zinc and stainless steel to meet the highest standards of safety and durability. Dual-flush and stop-and-go flush equipment for WCs make operation more economical by lowering water consumption. Infrared and pneumatic flush actuations supplement the product range of high-quality actuator plates.

The new Geberit urinals Preda and Selva are the first urinals that do not have to be removed for maintenance. A huge plus for hotels. These urinals are easy to service, are available in two designs and can be upgraded at any time from waterless function, a classically flushed version to a compact solution with an integrated flush control.

- 6 Sigma30 design family
- 7 Sigma50 design family

Geberit urinal Preda

Geberit urinal Selva

Water-saving overall concept

The spray head has been precisely designed to fit the clever inner geometry of the ceramic pan. As a result, just 0.5 litres of water are enough to ensure an optimal flushing out. Even lower water consumption is achieved by the individually adjustable flushing programmes, such as the intelligent interval flushing.

No concealed dirt

The rimless ceramic pans facilitate cleaning, improve hygiene and prevent unpleasant odours. It is getting easier and faster for the cleaning staff.

As easy as pie

The practical docking station enables access to the control unit at any time and can be removed with one hand.

The advantages at one glance:

- The Geberit urinals Preda and Selva are available with a classical flush system, an integrated one or waterless.
- Upgrading is possible at any time.
- Rimfree ceramic pans.
- No need to remove the pan for maintenance, service or upgrade.
- Unified design families of the actuators.
- Urinal flush actuations with anti-theft protection.

The advantages at one glance:

- User-friendly handling.
- Fast response with dual-beam IR detection.
- Touchless operation for improved hygiene.
- Interval flush with adjustable flush time.
- Design and surfaces easy to clean and to maintain.
- Easy to service.
- Protection against vandalism.

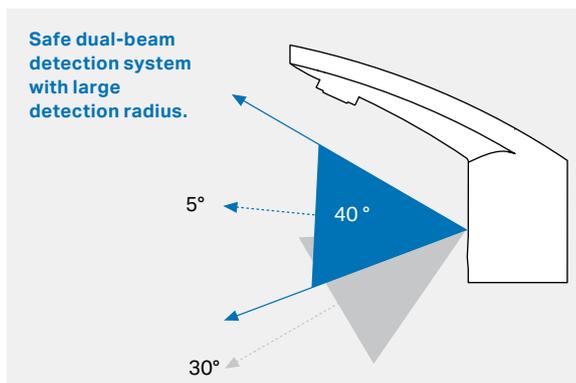

Electronic taps.

The public calling cards.

Electronically controlled Geberit lavatory taps respond particularly quickly and are functionally reliable. The alternating dual-beam detection system has an unusually wide scanning range for detection reliability. Various operating programmes, such as a water-saving programme, economy mode, interval flush or continuous flush can be programmed. The interval flush prevents drinking water stagnation in the pipe; the continuous flush can be actuated for thermal disinfection. The taps can be deactivated manually for cleaning.

The Geberit lavatory taps are available for deck-mounted and wall-mounted installations. Their bright chrome-plated surfaces and compact design make them easy to clean and service as well as attractive to look at. The functional design fits in every public bathroom concept.

The advantages at one glance:

- No invasion of the hotel guest's privacy.
- No complaints due to bathroom noise from guests.
- No restrictions in your bathroom design.

Sounds good, looks great.

Reducing sanitary noise in your hotel with the Geberit system solution.

Noise reduces our quality of life. We all feel disturbed by noise, especially when we try to sleep, read a book or focus on our work. This is why a great deal of effort is made to make buildings quiet. However, one source of noise is often neglected – waste water. This disturbance is not necessary. It is possible to improve the residents' quality of life and as a result the value of the building by paying more attention to planning and installation – and with the help of Geberit.

Sanitary installations do not need to be noisy. Geberit offers all you need to achieve silence: a system of silent and easy-to-install products as well as specialised know-how in planning and installation. Reducing sanitary noise is easier than you may think. The effect is not only audible, but also visible, since silent Geberit installations are an ideal basis for great bathroom designs.

Silent discharge piping:
reduces the noise at the source.

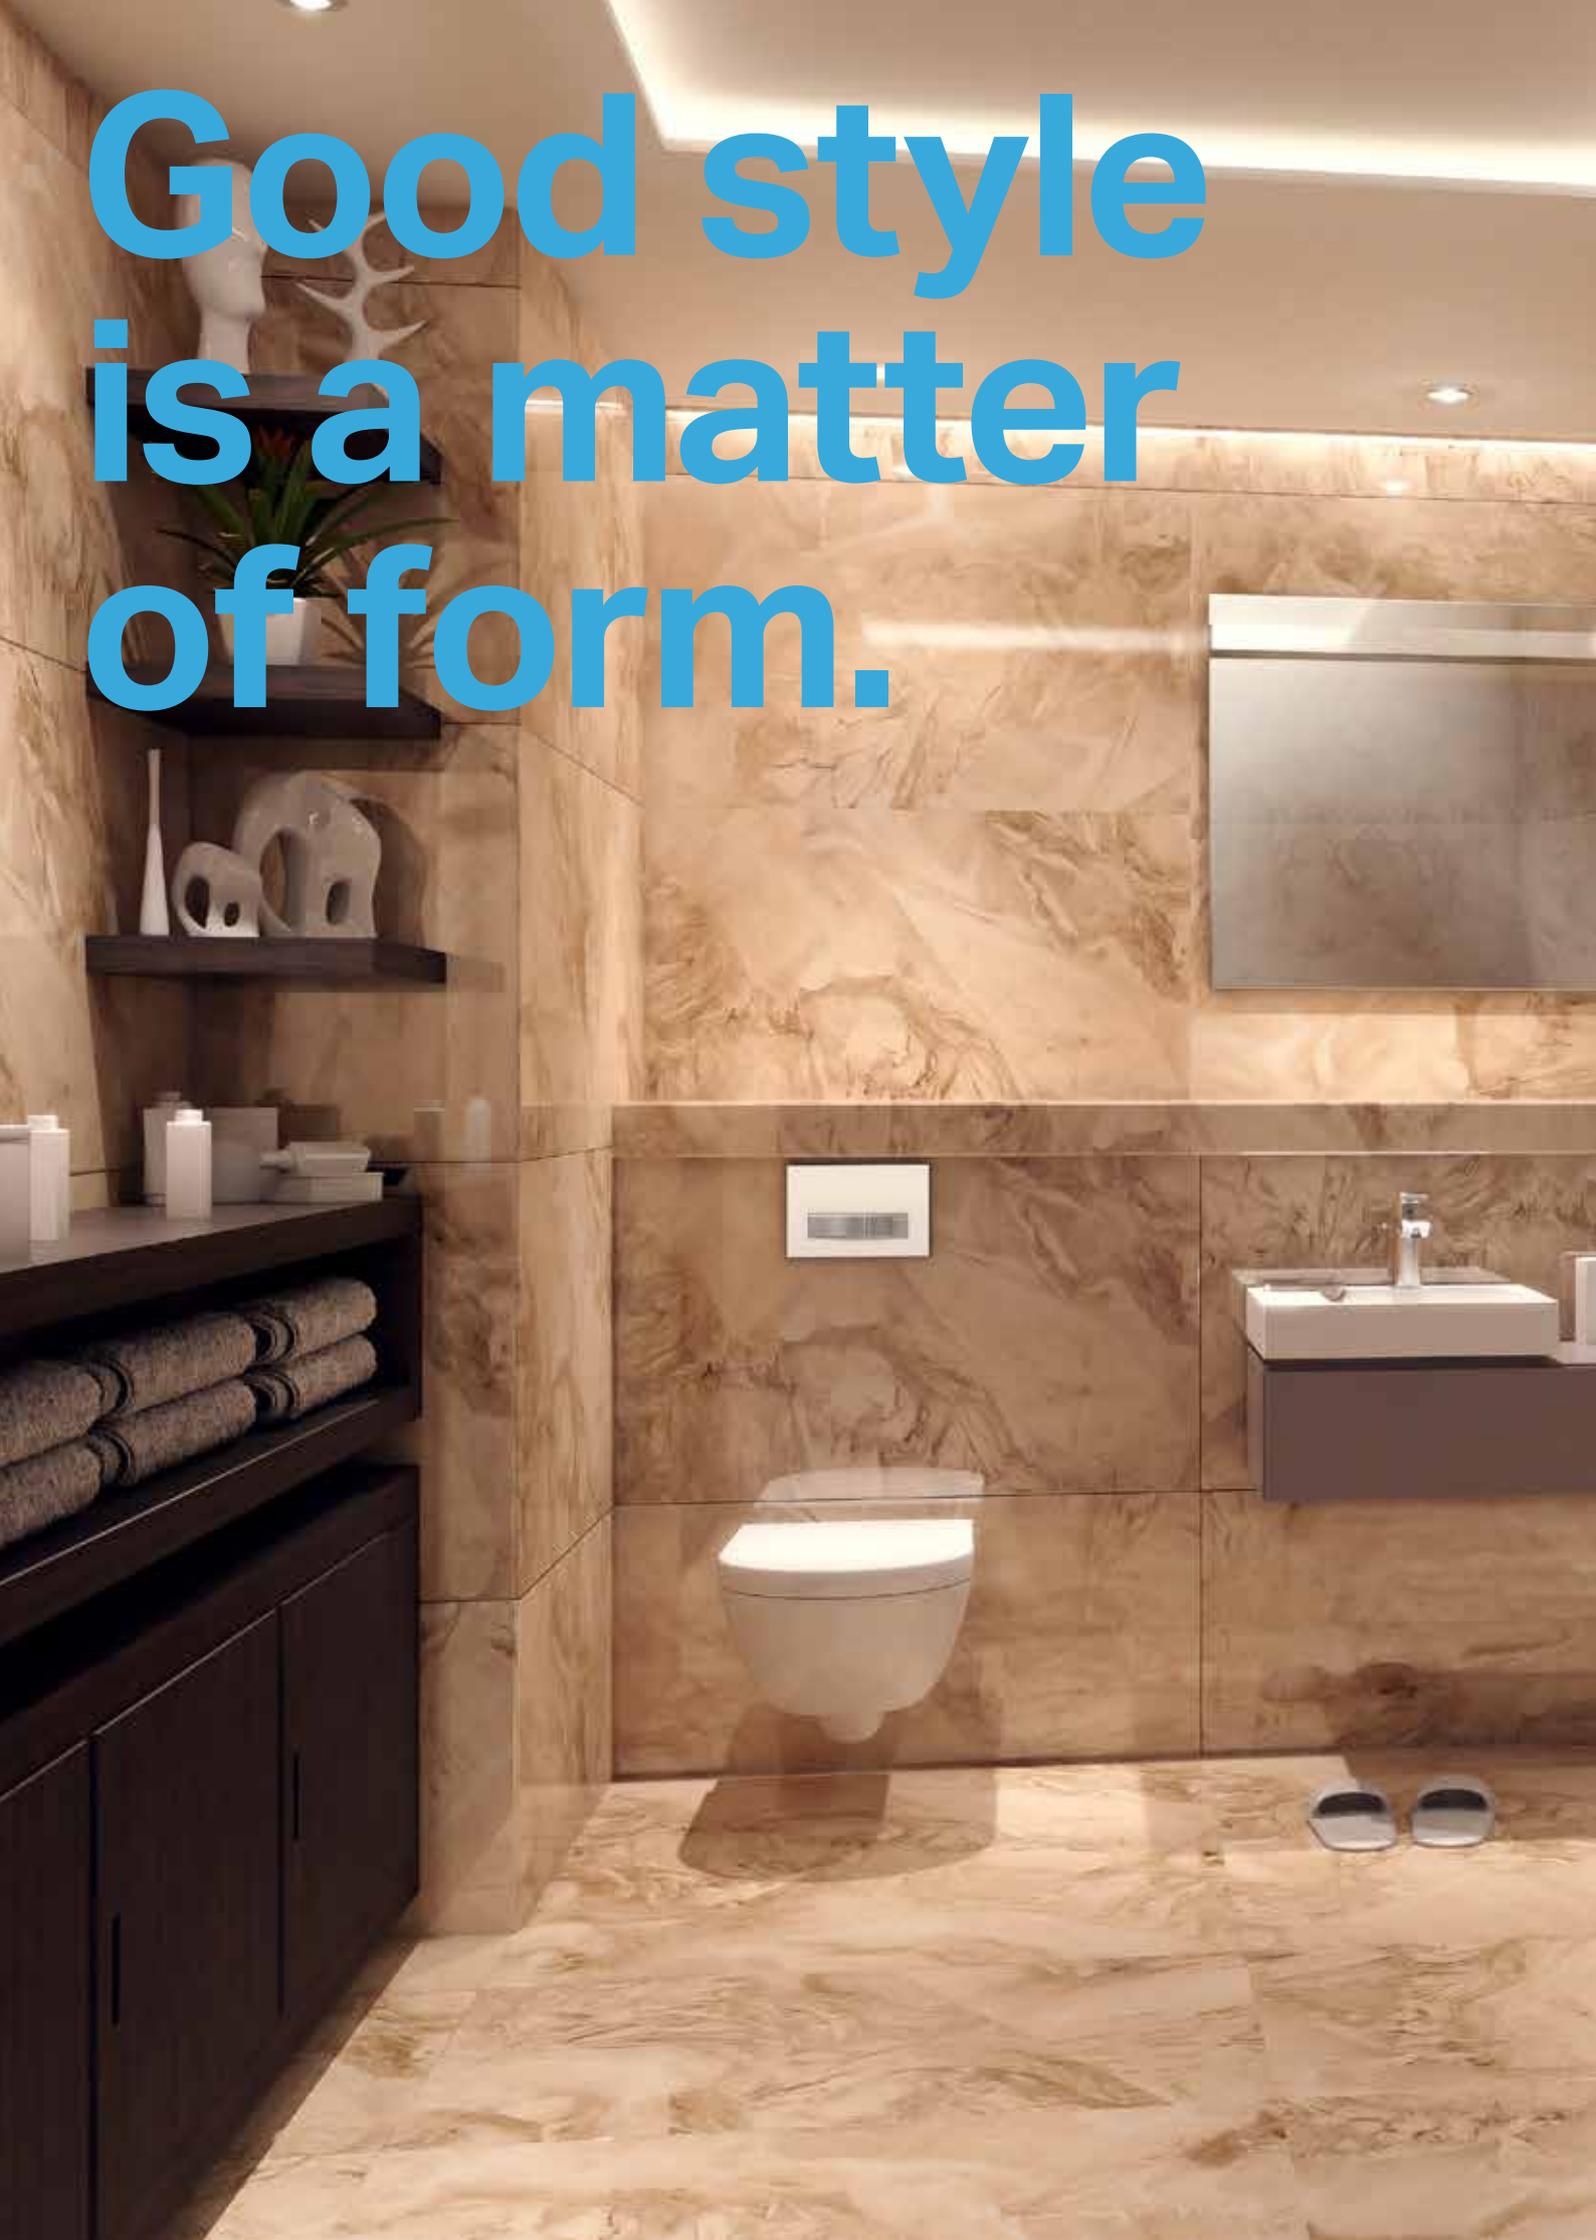

Prewall with acoustic insulation:
stops noise from travelling
through the walls.

Same-floor drainage:
protects the neighbours.

Wall-hung toilet:
stops noise from travelling
through the floors.

**Good style
is a matter
of form.**

Ceramics.

The bathroom outfit.

Geberit was long known for the installations behind the wall. In the meantime the product portfolio is moving in front of the wall with a wide range of ceramic toilet bowls, washbasins, bathtubs, shower trays, shower walls, mirrors and furniture. For every taste the right product lines.

The advantage to combine the technique behind the wall with the ceramic products in front of it are obvious: everything comes from one source, as well as consulting, delivery and service.

Keramag Smyle

Keramag Icon

KERAMAG
Geberit Group

Keramag Silk

Keramag Renova

The advantages at one glance:

- One for all: the bathroom equipment from one source.
- High-quality products.
- Many different designs: for every taste the right option.

The advantages at one glance:

- Significantly lower bacteria build up.
- All stains are visible and easy to remove.
- Reduced use of chemicals.
- Ideal for hotels, as the cleaning is fast and easy.
- With the KeraTect® glaze the surface of the ceramic gets smoother and thus even easier to clean.

Rimfree®

Rimfree life.

A hygienic plus for the smallest room.

Keramag offers a large range of toilet ceramics without a rim. That makes the cleaning extremely easy as you reach the whole surface and see every spot. A classic rim is a good place for bacteria and urine scale deposits. Without that rim, stains are easily detected and removed. Ideal for places with a high hygienic standards.

Additionally to the rimfree toilet bowl, a special glaze called KeraTect® makes the surface so smooth that dirt has no chance. Especially in the long run it pays, as dirt or lime scale cannot accumulate. That glaze is optionally available for almost all models.

A rimfree Keramag toilet bowl is flushed with a patented system and is cleaning it thoroughly.

The Keramag ceramics are optionally available with the KeraTect®, a fired to form glaze, that arrays the ceramics' surface with an extremely smooth and long-lasting cover. This helps to keep the surface clean, as dirt has no chance to adhere to the WC.

Standard toilet with a rim

The classic rim is hard to clean and is promoting deposits for bacteria, lime scale and urine scale.

WC with an open rim

The open rim is a bit easier to clean and still provides the classic look.

Rimfree WC

A rimless ceramic is the most hygienic solution and there is no need to use aggressive cleaners.

Geberit AquaClean.

Well-being begins in the bathroom.

Pamper your guests with a new dimension in well-being. With Geberit AquaClean shower toilets, you will create the perfect atmosphere for wellness and complete satisfaction and thus exceed your guests' expectations and requirements in terms of comfort and hygiene before they have even left their hotel room.

Cleaning with water is not only especially gentle and thorough, it also gives you a unique feeling of freshness and cleanliness – the whole day long.

How it works:

- 1 A pleasant water spray set at the desired intensity washes you clean.
- 2 The shower nozzle is rinsed with clean water both before and after use.
- 3 The shower function can be switched on using the easy-to-operate control panel at the side.
- 4 Alternatively, use the remote control to start and adjust the shower function.

Products:

- 1 Geberit AquaClean Sela wall-hung
- 2 Geberit AquaClean Sela floor-standing
- 3 Geberit AquaClean 8000plus

2013

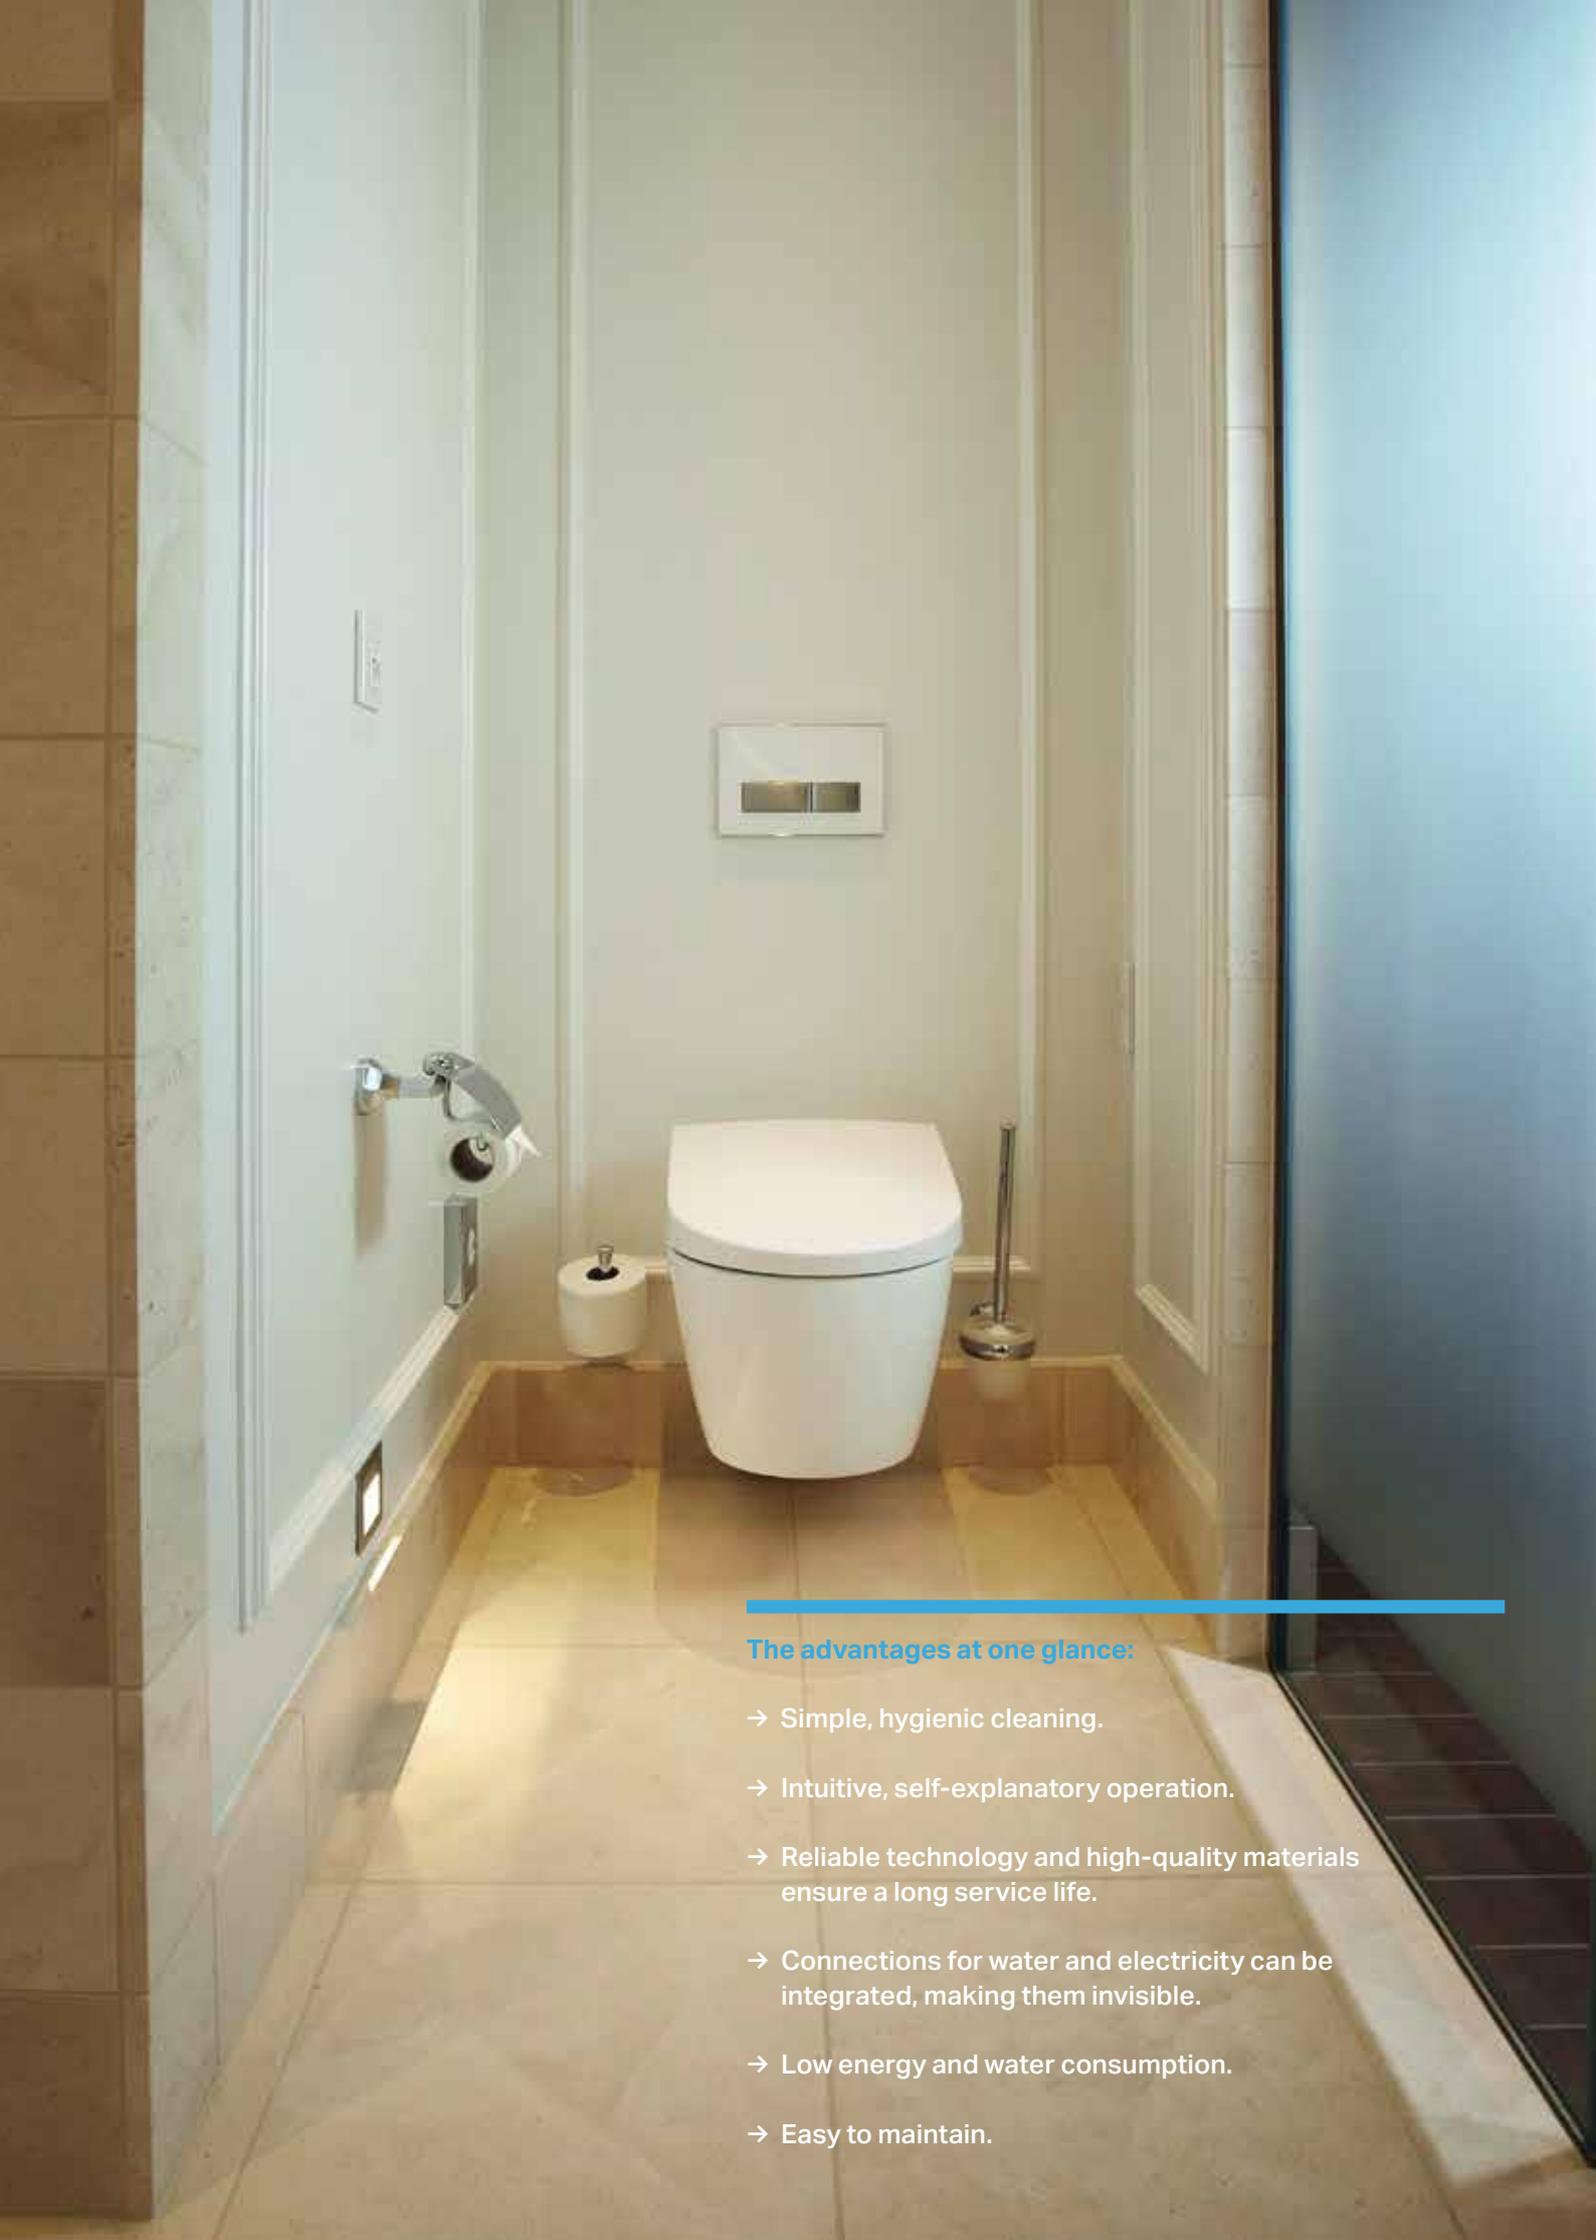

DESIGN PLUS

powered by: ISH

Build on quality: all Geberit AquaClean shower toilets are QPlus-certified. You find more information on → www.qplus.ch

The advantages at one glance:

- Simple, hygienic cleaning.
- Intuitive, self-explanatory operation.
- Reliable technology and high-quality materials ensure a long service life.
- Connections for water and electricity can be integrated, making them invisible.
- Low energy and water consumption.
- Easy to maintain.

The advantages at one glance:

- A floor-even shower upgrades the look of your bathroom.
- The wall drain allows a homogenous tiling and enables an efficient cleaning.
- The maintenance of the wall drain is quick and easy.

Shower drains.

In the wall or in the floor.

You have the choice. Either the water gets drained through the wall – which gives you the chance to keep the floor completely obstacle-free – or you go for the Geberit CleanLine floor drain, that is smoothly integrated in the floor.

Both variants are easy to clean due to a removable hair-sieve in the wall drain, and the optional collector profile, or the clever sieve solution in CleanLine.

Thanks to the covers that are available in different designs, the wall drain fits into every bathroom, into every ambience.

Geberit Monolith.

A potential classic of the future.

Highlights.

For a bathroom with an aura of luxury

Geberit Monolith – this name stands for a unique and timeless elegance in connection with a WC, a washbasin and a bidet. The installation of the sanitary module is simple and usually does not need any structural modifications.

Combinations are allowed

The Geberit Monolith sanitary modules offer undreamed-of possibilities for the design of your bathroom. Be it only one alone or combined with a second or third one. If you cannot do without a bidet, just place the respective module next to the one of the WC and the picture is complete.

The advantages at one glance:

- The sanitary modules are available for WC, bidet and washbasin.
- They are available in different heights.
- The sanitary module for the washbasin is available with optional drawers on the left or on the right, or even on both sides.
- The installation is quick and easy.

Renovation.

In a few hours. Without breaking the wall.

Does your hotel need a soft renovation and you do not want to spend too much time? Do you want to avoid retiling and breaking down walls? The Geberit Monolith is the perfect choice for this. In only a few hours the bathroom can be used again as neither the wall nor the floor tiles will be affected.

Before renovation.

The installation of the Geberit Monolith is a simple, quick and clean solution for renovations. The walls do not need to be opened and existing water and drainage connections can be used. Work is kept to a minimum.

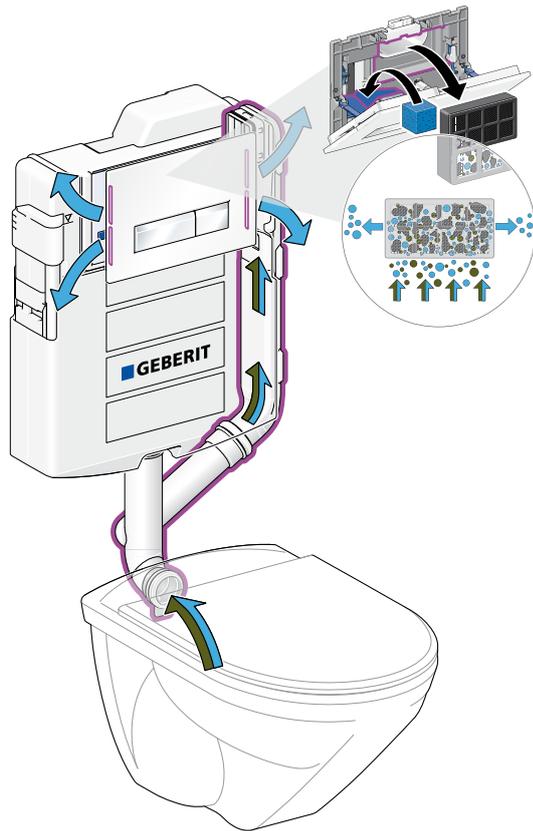

After renovation.

The appearance of the Geberit Monolith cannot be compared to common exposed cisterns. A very elegant upgrade to a bathroom.

Geberit DuoFresh.

Fresh air.

Bathrooms in hotels are usually inside recumbent. This means that a good ventilation is necessary to keep the air fresh. The Geberit DuoFresh extracts the unpleasant odours at their source and purifies the air using the active carbon filter which is concealed behind the actuator plate. The filtered and cleansed air is released back into the room. After ten minutes the ventilation stops automatically.

Accessible

The filter and the insert for in-cistern blocks are easily accessible via the actuator plate.

Quiet

A very quiet ventilator is releasing the fresh air back into the room.

Efficient

The air is purified efficiently with the aid of the active carbon filter.

Direct

Unpleasant odours are extracted directly at their source inside the WC ceramic.

Geberit DuoFresh is your recipe for constantly fresh air in the hotel bathroom. Even without windows or an additional ventilation system, you have an energy-saving possibility to ventilate the room.

DESIGN **PLUS**

powered by: **ISH**

The advantages at one glance:

- Odours evidently influence our mood. Geberit DuoFresh erases the bad ones immediately where they occur.
- It is more efficient and energy-saving than room sprays or open windows.
- The functionality of DuoFresh is not affected by the size of the room.
- Easy handling by the touch of a button.

Precious longevity.

The advantages at one glance:

- Save space, time and money by choosing Geberit's concealed and wall-hung solutions.
- Working with Geberit ensures project support and planning reliability.
- Geberit makes sure that the planners, architects and installers get the product knowledge-transfer to guarantee a smooth project flow.

Genuine partnership.

Sophisticated bathroom planning.

Geberit is the choice for hotel projects for a lot of reasons.

- More than 140 years experience in the sanitary industry.
- Proven reliability of the Geberit products: they are functional, efficient and sustainable.
- The design of the products fulfill a hotel guest's wish for emotional well-being.
- Appliances in front of and behind the wall from one source.
- Geberit products are easy to maintain.
- You have the freedom of planning in new projects.
- And you get elegant solutions for a hotel renovation.

Recognised service.

Our work has won awards. Geberit regularly wins prizes for outstanding performance in the area of sustainability. The Canadian media company Corporate Knights, for example, named Geberit one of the 100 most sustainable businesses.

Care in the Square.

Geberit creates sustainable quality of life. With innovative water management, comprehensive know-how and a strong focus on sustainability.

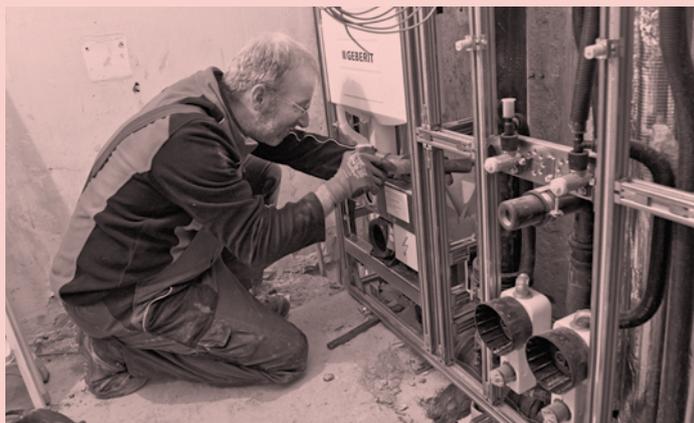

System technology that pays off

More and more private, institutional and public building owners are now realising that sustainable construction pays off, which offers Geberit's perfectly conceived installation systems a further opportunity to come into their own.

A sustainable building is the result of a fundamental decision. The sanitary technology has to be able to uncompromisingly and comprehensively support this decision. Under no circumstances should it bring about situations that hinder the building owner's ambitious goals or add needless expense to it.

With a complete and perfectly coordinated range of installation systems, Geberit offers customised solutions for every conceivable construction situation. Whether building sanitary prewalls and partition walls in lightweight construction projects or installing sanitary systems in solid construction projects, the system technology from Geberit always creates the perfect prerequisites. It guarantees maximum comfort, freedom as to where the sanitary appliances can be positioned and rapid construction progress. Furthermore, it also complies with all current fire protection and sound insulation requirements. This ensures that planners and plumbers do not have to make any compromises that could turn out to be unfavourable by as early as the medium term.

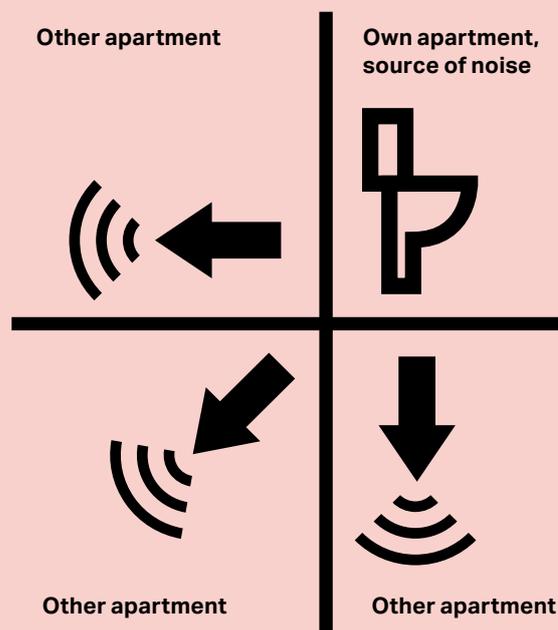

Just how sustainable a building really is usually only becomes clear in its usage phase. As demonstrated time and again, well-conceived system solutions that may perhaps be more expensive initially can prove considerably less expensive when the entire service life of a building is taken into consideration. Each time sanitary installations are subsequently adapted or added to, it pays to have opted for the proven system technology from Geberit right from the outset.

The system technology from Geberit also proves itself when modernising bathrooms.

Having a quiet place at home to escape to is vitally important nowadays.

Intelligent and effective sound insulation solutions featuring Geberit system technology make a sustainable improvement to people's quality of life.

Paths travelled by noise from sanitary appliances.

Acoustic insulation that delivers on its promises

- **Reduction in airborne sound transmission through:**
 - Certified prewall installations or complete, certified installation walls
 - Sound insulation mats
 - Encapsulation of discharge pipes and stacks
 - Use of acoustically optimized discharge pipes
- **Reduction in structure-borne sound transmission through:**
 - Decoupling of pipes from the building structure
 - Elastic fastenings for sanitary appliances
 - Solid-borne sound insulation between the pipe and building
 - Certified prewall installations or complete, certified installation walls

**All over the world hoteliers trust in
